## 1. General

This collection of datasheets contains information on Danfoss hermetic refrigeration compressors and condensing units for 220-240V especially designed for refrigeration systems using propane, refrigerant R290 ( $C_3H_8$ ).

R290 is classified as a flammable refrigerant of class A3 according to ANSI/ASHRAE 34. Accordingly, special safety regulations must be complied with. For domestic appliances a special Test Schedule has been integrated in the European Standard EN 60335-2-24 and IEC 60335-2-24. For commercial refrigerators IEC 60335-2-89 will include flammable refrigerants.

Danfoss compressors and condensing units for R290 must only and exclusively be used in appliances certified for R290 according to these or later regulations. This means that the compressors must not be used in appliances which are not originally designed and certified for R290.

The programme consists of the basic types TL, NL and SC. The fan cooled condensing units for R290 are based on the TL, NL and SC compressors.

### 1.1 Designations

The compressor designations are built up according to the following system:

Design	Optimization level	Compressor size	Application range	Start characteristics
TL	Blank Standard energy level	Nominal displacement in cm <sup>3</sup>	CN R290 LBP/MBP	K = LST characteristics (capillary tube)  X = HST characteristics (expansion valve)
NL				
SC				

### Examples

TL		5	CN	K
NL		7	CN	K
SC		12	CN	X

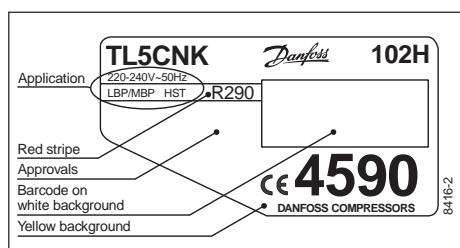

The condensing units designations are based on the compressor designations, extended by a version designation. For the time being, only N0 with solder connection, for capillary tube systems, is available.

Example: SC12CNXN0

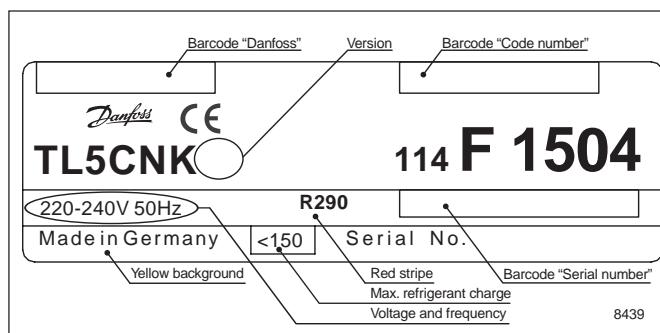

## 1.2 Design

All compressors featured in this collection for R290 from the TL, NL and SC range are standard efficiency types.

## 1.3 Type label

Compressors

Condensing units

All compressors have a yellow label with the type designation. This label has a red stripe and the text "R290".

The country of origin indicated on the compressor paper label and on the compressor cover varies depending on the manufacturing place. Information can be found on our technical information sheet "Country of Origin".

All condensing units have a yellow type label located on the condenser and the packing. It gives the code number, model designation, rated voltage, frequency, refrigerant and a serial number.

## 1.4 Data stamping

The compressor type and production date are stamped on the side of the compressor. The information may be as follows,

L-5CN-4590  
F-201E2207

The first line states the model designation and the code no.

L = last letter (or last two letters) of the compressor type  
 -5CN- = nominal displacement and application  
 4590 = 4 last digits in the code no.  
 (-) = position mark)

The second line states the date of manufacture and internal Danfoss codes.

F = manufacturing place (F = Germany, AL = Slovenia, AM = Mexico)  
 20 = week 20  
 1 = 2001  
 E = Friday (A = Monday etc.)  
 220 = nominal voltage  
 7 = internal Danfoss code

## 1.5 Dimensions

The build-in conditions (total height, weight, tube dimensions etc.) are specified in the individual datasheets including dimensioned sketches.

## 2. Application range CN

Compressors with denominations ending with **CN** are designed for low evaporating temperatures (**LBP Low Back Pressure**) and medium evaporating temperatures (**MBP Medium Back Pressure**) for use in commercial refrigerators, freezers and similar applications in regions with normal supply voltage.

The following table shows the normally recommended applications as regards voltage/frequency, ambient temperature, evaporating temperature and necessary compressor cooling. The recommendations must be regarded as a guideline only as they presuppose a proper dimensioning of the refrigeration system.

Compressor		Mains [V/Hz]	Ambient temperature					
			32°C		38°C		43°C	
			LBP	MBP	LBP	MBP	LBP	MBP
CN	TL5NCK	198 - 254 /50	F <sub>1</sub>	F <sub>1</sub>	F <sub>1</sub>	F <sub>1</sub>	F <sub>1</sub>	F <sub>1</sub> *
	NL7CNK	198 - 254 /50	F <sub>1</sub>	F <sub>1</sub>	F <sub>1</sub>	F <sub>1</sub>	F <sub>1</sub>	F <sub>2</sub>
	NL9CNK	198 - 254 /50	F <sub>1</sub>	F <sub>1</sub>	F <sub>1</sub>	F <sub>1</sub>	F <sub>2</sub>	F <sub>2</sub> *
	SC10-12-15-18CNK	198 - 254 /50	F <sub>2</sub>	F <sub>2</sub>	F <sub>2</sub>	F <sub>2</sub>	F <sub>2</sub>	F <sub>2</sub>

S = Static cooling normally sufficient

O = Oil cooling

F<sub>1</sub> = Fan cooling 1.5 m/s (compressor compartment temperature equal to ambient temperature)

F<sub>2</sub> = Fan cooling 3.0 m/s necessary

■ = Outside application range, not recommended

\* = Run capacitor compulsory

The application limits regarding evaporating temperatures and motor systems are specified in the individual datasheets.

## 2.1 Design limits

In order to secure a satisfying lifetime of the compressor, and to protect the compressor against overload, some design criteria for the appliances must be fulfilled.

Both the condensing temperature and the compressor temperature should be kept as low as possible. This can be done by using well-dimensioned condenser surfaces and by ensuring good ventilation around the compressor under all operating conditions.

In order to protect the compressor against overload, the compressor has to start and work properly through pressure peaks obtained in the highest ambient temperature and lowest working voltage. At peak load the condensing temperature must not exceed 65°C. The winding temperature must not exceed 135°C.

At stable operation conditions the condensing temperature must not exceed 55°C. The winding temperature must not exceed 125°C.

These limitations ensure a protection of valves, gaskets, oil, and motor insulation.

The condensing units are designed for 32°C ambient temperature, but can also be used in 43°C ambient. On some models 2 different condenser sizes are available, allowing for different application limits. Detailed information can be found in the individual datasheets.

Condensing temperature  
Winding temperature

## 3. Electrical equipment

The compressors are equipped with a single-phase AC motor. All compressors for R290 are designed for use with **Low Starting Torque (LST)** or **High Starting Torque (HST)**.

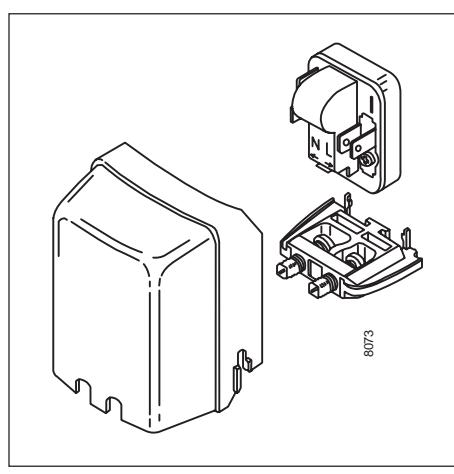

The electrical equipments are classified as "normal tight" (IP20)

The motor protector is built into the motor (winding protector).

Earth connections are located on the bracket around the current lead-in of the compressor.  
*No attempt must be made to start the compressor without a complete starting device.*

The compressors can be supplied with the following motor systems:

### 3.1 LST (RSIR)

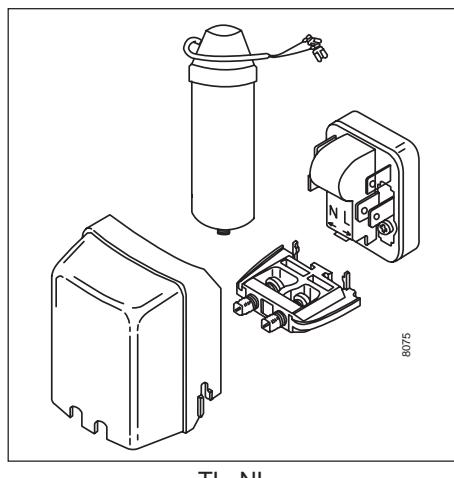

TL, NL

Compressors with the motor type **Resistant Start Induction Run (RSIR)** have a starting device for **Low Starting Torque (LST)**. This starting device consists of a PTC, a cord relief, and a cover and is used for compressors with the denominations TL and NL. The PTC starting device requires a pressure-equalization before each start. This starting device is normally used in well-designed refrigerating systems with capillary tube as throttling device.

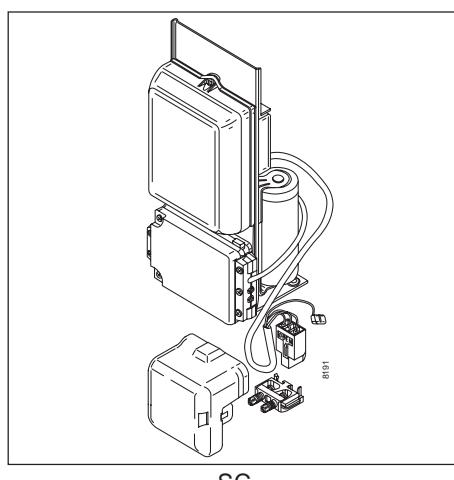

The PTC needs a compressor standstill period of 5 minutes to cool down before each start.

### 3.2 LST (RSCR)

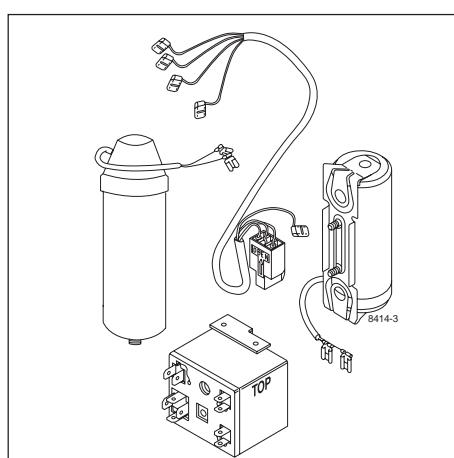

Compressors with the motor type **Resistant Start Capacitor Run** (RSCR) have a starting device for **Low Starting Torque** (LST). This starting device consists of a PTC and a run capacitor and is mandatory for compressors with the denominations TL and NL under certain conditions. The PTC starting device requires a pressure-equalization before each start. This starting device is normally used in well-designed refrigerating systems with capillary tube as throttling device.

### 3.3 HST (CSR)

Compressors with the motor type **Capacitor Start Run** (CSR) have a starting device for **High Starting Torque** (HST). This starting device consists of a starting relay, a starting capacitor, a run capacitor, a terminal board, a cord relief, and a cover. The starting device is mandatory for the SC compressors for R290. The starting capacitor is designed for short time cut-in. "1.7% ED", which is stamped on the starting capacitor, means for instance max. 10 cut-ins per hour each with a duration of 6 seconds. The starting device has to be placed where flammable concentrations of R290 in the air can not be reached, acc. to EN/IEC 60335-2-24, as it is to be considered as a possible igniton source.

Delivery as a kit is possible also, see datasheets.

For further information on which starting device to use on individual compressors, please refer to the actual datasheets.

### 3.4 Connections

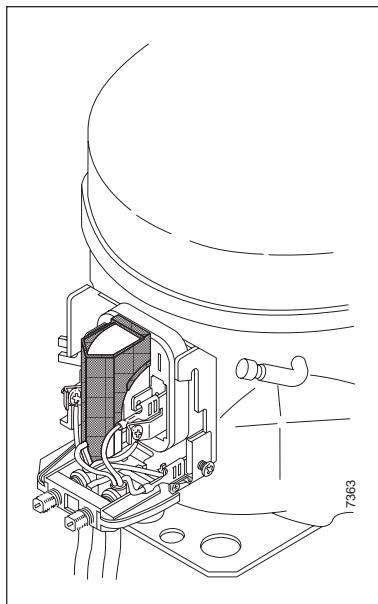

The electrical equipments are equipped with connectors depending on the ordered code number,

PTCs: 6.3 or 4.8 mm spade connectors and screws

Connection boxes: 6.3 mm spade connectors and screws

The power supply must be connected as shown in the wiring diagrams for the chosen electrical equipment given in the actual datasheets. Condensing units are equipped with connection boxes.

### 3.5 Approvals

The compressors have been approved in respect of safety by testing authorities in the majority of Western European countries. Actual standards to which the compressors have been approved are specified in the individual datasheets. Approval markings appear on the compressor labels.

*To fulfil the requirements of EN 60355-2-34 the protection screen 103N0476 must be applied to the PTC starting device.*

### 3.6 Condensing units

Fans are fitted with self-lubricating bearings and a large oil reservoir which ensures several years of operation without inspection. Except for the 5W and 10W fan, all motors have a built-in winding protector. The protectors are approved for the use with R290.

## 4. Moisture and Impurities

The compressors are dried to a maximum moisture content of 60 to 75 mg depending on the compressor size. The maximum impurity content is 40 to 50 mg depending on the compressor size.

## 5. Max. refrigerant charge

According to the European Standard EN 60335-2-24 or draft IEC 60335-2-89, which standard has to be complied with, the refrigerant charge must not exceed 150 g. Commercially available R290 must not be used because the fuel grades of these products are of a variable composition. These products may also contain impurities which could significantly reduce the reliability and performance of the system and lead to premature failure. All Danfoss compressors for R290 are released for a base purity of 99.5% or better. Impurities limits shall comply with DIN 8960 of 1998 (extended Version of ISO 916). For details see also separate documentation CN.60.F.

All users of refrigerant R290 should refer to the chemical data safety sheets for full information on the safe handling of R290.

In general the R290 charge is approximately 40 - 50% by weight than that for HFC. The refrigerant charge must never be too large to be contained on the condenser side of the refrigeration system. Only the refrigerant amount which is necessary for the system to function must be charged.

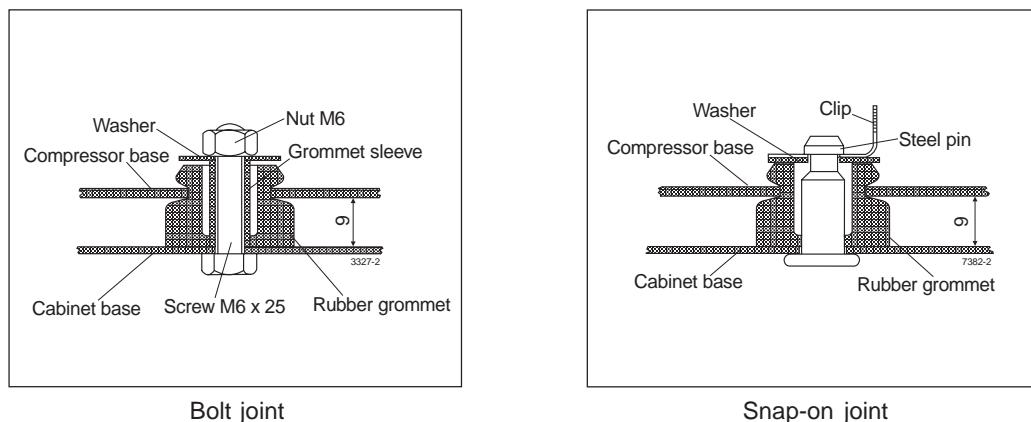

## 6. Oil charge

The compressors are supplied charged with dried and degassed oil, which is normally sufficient for the lifetime of the compressor. The refrigeration systems and the system components must be dimensioned in such a way that the oil can be lead back continuously to the compressor housing without accumulating in the system, e.g. without oil pockets and with sufficient gas velocity. The compressors use polyolester oils and are approved only for these oils and R290.

The oil charge is specified in the individual datasheets.

## 7. Mounting

### 7.1 Mounting accessories

Bolt joint

Snap-on joint

The mounting accessories for the compressors are available in two versions, with bolt joint or snap-on joint.

The rubber grommets are designed for the 16 mm holes of the baseplate.

Bolt joint for one compressor in a bag 118-1917

Bolt joint in quantities 118-1918

Snap-on in quantities 118-1919

## 8. Condition at delivery

The compressors are delivered without mounted starting devices on pallets with the dimensions 1144 x 800 mm. Quantities per pallets are specified in the individual datasheets. Electrical equipment is packed in separate boxes.

The most important performance controls carried out during manufacturing are,

- A high potential insulation test with 1650V for 1 second
- Pumping capacity
- Tightness of discharge side and discharge valve
- Tightness of compressor housing
- Check of the right oil charge
- Noise test

The compressors are supplied with sealed connectors and the sealing should not be removed before the system assembly takes place (max 15 minutes with open connectors).

## 9. Conversion from R502/R22 or R404A/R507 to R290

Normally, the same system components can be used as were used with R22. However, an adjustment of the charge has to be made.

Especially the system design has to follow safety standards as EN/IEC 60335-2-24 or IEC 60335-2-89, EN 378 or national standards.

A drier with 3Å desiccant of Molecular Sieves or a hard core drier compatible with R290 must always be used.

Rules for dryness and cleanliness of system components (DIN 8964) are transferred to R290 systems.

The compressors must be soldered into the system no later than 15 minutes after the connector seals have been removed.

The same evacuation procedure as for R22/R502/R404A systems must be used.

Max. 1% non-condensable gases.

The system must not contain any chlorine.

## 10. Warnings

Yellow warning label

R290 is flammable in concentrations of air between approximately 2.1% and 9.5% by volume (LEL lower explosion limit and UEL upper explosion limit). An ignition source at a temperature higher than 470°C is needed for a combustion to occur.

No high potential test nor start tests must be carried out while the compressor is under vacuum.

No attempt must be made to start the compressor without a complete starting device.

Allow the compressor to assume a temperature above 10°C before starting the first time in order to avoid starting problems.

Anti-freeze agents must not be used in the compressors as such agents are damaging to several of the materials used. In particular, the ethyl or methyl alcohol contents of such anti-freeze agents have a destructive effect on the synthetic motor insulation.

## LBP/MBP Condensing Unit

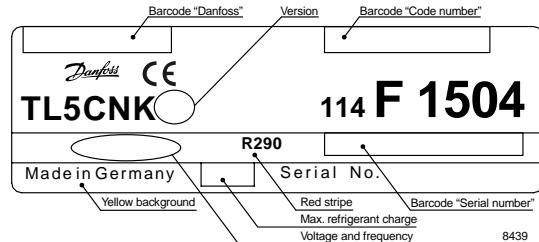

### R290 (Propane)

### 220-240V 50Hz

#### Data Sheet

##### General

Condensing unit		TL5CNK
Version	Size	Code number
N0 - for capillary tube	BG1	114F1504

##### Application

Application	LBP/MBP
Evaporating temperature range at 32°C °C	-40 to 5
at 43°C °C	-40 to -20
Voltage range V/Hz	198 - 254 /50
Maximum refrigerant charge R290 g	150

##### Flammable Refrigerant:

Unit must only be installed and serviced by authorized personnel (see instructions "Fan-cooled Condensing Units 220-240V for R290", CI.34.C.).

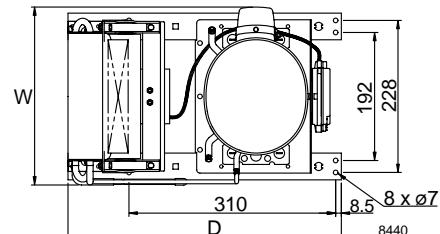

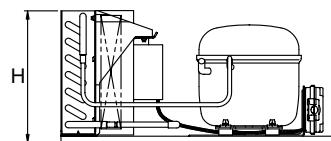

Yellow warning label  
B122-3

##### Packing data

Net weight	kg	11.3
Gross weight	kg	13.5
Package height	mm	245
Package width	mm	400
Package depth	mm	530

##### Dimensions

Height (H)	mm	198
Width (W)	mm	267
Depth (D)	mm	410
Distance (a)	mm	310
Suction connection	I.D. mm	6.2
Liquid connection	I.D. mm	6.5
Process connection	I.D. mm	6.2

## LBP/MBP Condensing Unit

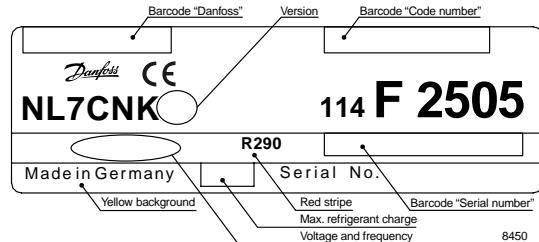

### R290 (Propane)

### 220-240V 50Hz

#### Data Sheet

##### General

Condensing unit		NL7CNK
Version	Size	Code number
<b>N0 - for capillary tube</b>	<b>BG2</b>	<b>114F2505</b>

##### Application

Application	LBP/MBP
Evaporating temperature range at 32°C °C	-40 to 5
at 43°C °C	-40 to -15
Voltage range V/Hz	198 - 254 /50
Maximum refrigerant charge R290 g	150

##### Flammable Refrigerant:

Unit must only be installed and serviced by authorized personnel (see instructions "Fan-cooled Condensing Units 220-240V for R290", CI.34.C).

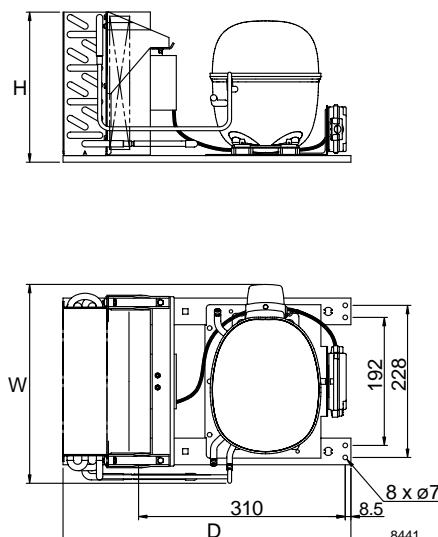

Yellow warning label 81/22-3

##### Packing data

	114F3503	114F4503
Net weight kg	18.8	20.6
Gross weight kg	20.8	22.6
Package height mm	275	320
Package width mm	400	400
Package depth mm	530	590

##### Dimensions

	114F3503	114F4503
Height (H) mm	256	296
Width (W) mm	310	330
Depth (D) mm	444	451
Distance (a) mm	325	325
Suction connection I.D. mm	10.2	10.2
Liquid connection I.D. mm	6.5	6.5
Process connection I.D. mm	6.2	6.2

drawing shows N0 version

**Capacity (EN 13215/CECOMAF)**

Test conditions (220V 50Hz) EN 13215/CECOMAF DIN 8971

Ambient temperature 32°C

32°C

Suction gas temperature 32°C

25°C

Temperature of refrigerant at condenser outlet is subcooled within the condensing limits of the unit.

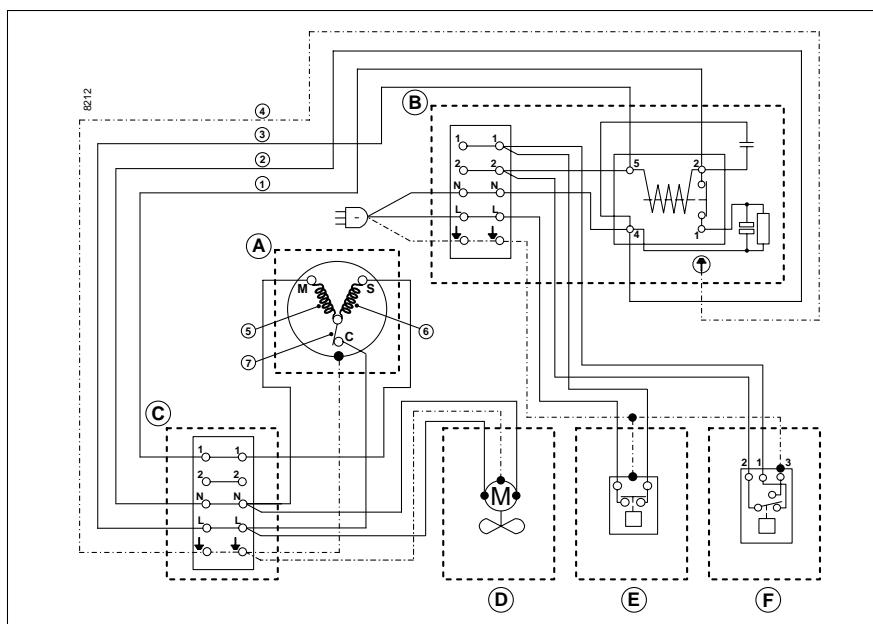

1 Watt = 0.86 kcal/h, 1 Watt = 3.41 Btu/h

**Spareparts**

Devices	114F3503	114F4503
Size	BG3	BG4
Condenser	118U0102	118U0103
Fancowl	118U0403	118U0404
Fanblade	118U0600 (Ø 230 mm)	118U0601 (Ø 254 mm)
Fanmotor	118U0201 (11W)	118U0202 (16W)

**Wiring diagram**

Fig.	Devices
A	Compressor
B	Danfoss electrical equipment
C	Extra connection box
D	Fan motor
E	Pressure switch
F	Thermostat
1	Black wire
2	Blue wire
3	Brown wire
4	Green-yellow wire
5	Main Winding
6	Start Winding
7	Winding Protector

## The Danfoss product programme for the refrigeration industry contains:

### Compressors for Refrigeration and Air Conditioning

A wide range of hermetic reciprocating compressors and scroll compressors as well as aircooled condensing units. The product range is applied in air conditioning units, water chillers and commercial refrigeration systems.

### Compressors for Refrigerators and Freezers

Hermetic compressors and fan-cooled condensing units for household refrigeration units such as refrigerators and freezers, and for commercial installations such as sales counters and bottle coolers. Compressors for heating pump systems. 12 and 24 V compressors for refrigerators and freezers in commercial vehicles, buses, and boats.

### Appliance Controls

For the regulation of refrigeration appliances and freezers Danfoss supply a CFC-free product range of electromechanical thermostats for refrigerators and electromechanical thermostats for refrigerators and freezers produced according to customer specification; Hermetic valves for refrigerator/freezer combinations and for energy saving applications; Service thermostats – for all refrigerating and freezing appliances.

### Refrigeration and Air Conditioning Controls

With our full product range we cover all the requirements for mechanical and electronically controlled refrigeration systems. The functions cover: control, safety, system protection and monitoring. Our products are applied for all commercial- and industrial refrigeration applications as well as for air conditioning.
